

## **Jan Forster**

I qualified in 1987 and worked in Nottingham until moving to Leeds in 1996 to work at Killingbeck Hospital. I am currently Consultant Cardiac Congenital Sonographer at Leeds Teaching Hospitals providing echo provision for the fetus, neonate, child and adults with congenital heart disease. I hold BSE adult and AECVI congenital echo accreditation. I have been an active member of BSE for many years and joined BCCA Council in 2019 as physiologist representative. I regularly present at local and national meetings. I am involved with post graduate echo training for physiologists and obstetric sonographers at Leeds University.

I have been involved with Cardiac Risk in the Young for more than 15 years scanning elite athletes and also with family screenings. I have also been involved with Tiny Tickers for many years and am one of the trainers providing cardiac training for obstetric sonographers across the UK. In addition, I have also been privileged to work with Chain of Hope as a volunteer.
